

DATA QUALITY AS A SERVICE (DQAAS)

Data Quality / Master Data Management Services

Data Quality has increasingly become a concern for our stakeholders when examining and absorbing the KPIs we develop for their adhoc, daily, weekly, monthly and annual reporting requirements. The Data Management Consulting Practice has been developing tools and techniques for managing data quality and we have become part of countless quality related projects from simple data profiling and forensics to the implementation of complete master data and data quality programs.

Data quality (DQM) program development, implementation and oversight

Master data management (MDM) program development, implementation and oversight

Profiling, standardization, matching, and cleansing

Data quality monitoring and reporting

Standards development and implementation

Data governance and stewardship

Business case development
