

Virtual Remote Walkdown Service

In these uncertain times, we understand you are faced with unique challenges when it comes to maintaining – let alone enhancing – your sites, equipment, and workforce. Emerson offers a variety of remote and virtual project service capabilities that can help you.

Virtual Remote Walkdown Service includes the following activities and more:

- Document all DCS/PLC/SIS system cabinets, MCCs, marshalling cabinets, field junction boxes, servers, control rooms, engineering areas, and system interfaces (including PLC's, drives, historians, and reporting and business systems).
- Assess the condition of the field wiring and system environments
- Review network infrastructure and connectivity between systems and locations
- Review the power systems, UPS, and available space for new equipment
- Evaluate marshalling philosophies and hazardous areas reviews
- Obtain the necessary system graphics screen prints, system documentation, and configuration database backups

Experience the following benefits:

- Review wiring options (re-wiring, re-locating, FlexConnect™ wiring Solutions) for cutover points
- Evaluate and recommend locations for new DCS/SIS equipment
- Review control room layout and operator efficiency improvements
- Identify changes in operator graphic technologies and alarm rationalization opportunities
- Document the configuration and identify the effort and opportunities for improvement around regulatory and advanced control
- Enable your capital project planning to continue to progress, despite short-term business interruptions

All this can be done remotely, with local personnel utilizing Zone 2 tablets capturing pictures/video of equipment, remotely connecting to Emerson's modernization experts, and by transmitting electronic documentation as needed. Emerson is able to send equipment to site as needed to support these activities.
