Features and Benefits

- Accurate and consistent setpoint control reduces the risk of flow assurance issues from over and under injection
- High-quality piston-sensed regulators for longevity in offshore applications reduce maintenance costs and unplanned downtime
- Alternative options for full automation of injection rate control with the addition of the ER5000

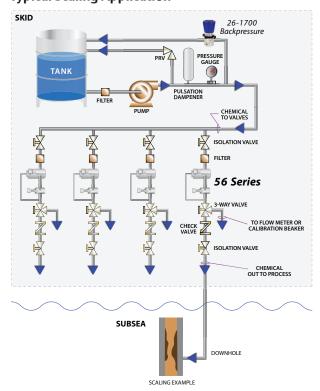

TESCOM 56-2000 Series provides accurate pressure control that allows customers to have consistent injection rates over the life of the well.

Applications

• Offshore Chemical Injection

Typical Scaling Application

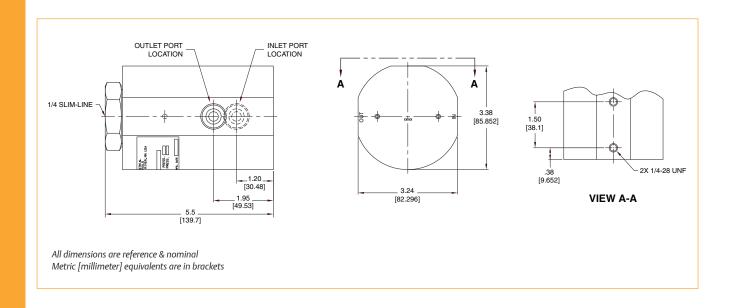

^{*} The 56-2000 requires a metering valve installed downstream to adjust the chemical injection rate (see diagram).
