

# Experienced OEM service and maintenance for pump protection

## **YARWAY** Maintaining your pump protection products prevent damage during low flow conditions resulting in expensive pump repairs and long downtimes

### Yarway automatic recirculation control valve (ARC)

Yarway Automatic Recirculation Control valve (ARC), is a self-contained, effective and reliable pump protection device engineered to protect your centrifugal pump from thermal damage and destruction during low flow events.

Yarway's ARC pump protection products provide your pump's minimum flow rate requirement during startup, shutdown and low flow operation. In order to ensure your valve continues to provide reliable pump protection, an on-going maintenance and inspection program is vital.

A full range of service offerings are available to keep your ARC valve operating at factory specifications. Call upon Emerson's service teams for your planned or unplanned maintenance needs as well as for a certified ARC flow test, performance improvements and technical support.
